(54) Title: A RADIANT DEVICE

(57) Abstract: A radiant device (1) comprises a supporting frame (2) and at least a radiant element (4) having two mutually opposed ends (4a), each being provided with electrical connection terminals (7). The radiant element (4) engages hooking groups (3) of the supporting frame (2) by means of suitable electrical connection elements (9) placed between the ends (4a) and the hooking assemblies (3). The elastic connection elements (9) dampen collisions and/or vibrations, if present, and insulate at the same time the electrical parts of the device (1) both from fluid seepages and from overheating.
